

# Social Care Services, Scotland, 2015

Published: **10 November 2015**

ISBN: 978-1-78544-803-4

## Introduction

This Statistics Release presents the latest national figures for Social Care services provided or purchased by Local Authorities in Scotland. These services give people the support, practical help and personal care that they need to live as independently as possible in the community.

The introduction of Self-directed Support (SDS) means that everyone eligible for social care and support has the right to choice, control and flexibility to meet their personal outcomes. This has resulted in changes to the way that Social Care information is recorded across Scotland. This report presents information on the following services:

- Home Care
- Community Alarm / Telecare and
- Direct Payments (now SDS “Option 1”)

A follow-up report reflecting the makeup of individuals’ support plans rather than how many people use each service will be published at a later date (see the background notes for more information).

**Figure 1: Home Care and Direct Payments clients, 2001 to 2015\***

\*Home Care data for March census week, Direct Payments data for financial year ending 31 March.

Source: Scottish Government Social Care Survey 2013-2015, Home Care Census / Self-Directed Support Survey 2001-2012

There are three sections to the report:

1. A summary of clients of **all ages** receiving Social Care services in Scotland
2. Service-level information on **older people**, aged 65+, receiving Social Care services
3. Service-level information on **working age adults**, aged 18 to 64.

## Key points

*All of the figures presented have been rounded to the nearest 10, 100 or 1,000.*

- There were 61,500 **people in Scotland receiving Home Care services** in March 2015, a figure similar to the last two years. These people received 706,000 **hours of Home Care** during the census week, a figure which has increased each year since 2011.
- In the financial year 2014-15, over 122,000 people received **Community Alarms and/or Telecare services**. *Note: this was previously only recorded for the March census week, which has resulted in an increase between 2014 and 2015.*
- Councils are increasingly purchasing services from the private and voluntary sector rather than providing it themselves. In 2015, nearly half (48%) of Home Care clients received a service **solely from their Local Authority**, compared to nearly three-quarters (73%) in 2007.
- **The number of people choosing a Direct Payment** to purchase the services they require continues to increase, with an estimated 6,450 clients and £86.1 million spent during the 2014-15 financial year.

Figure 2 shows the trend in Home Care clients and hours provided in the last 10 years. The number of Home Care clients has remained stable since 2013, following decreases in previous years. The number of Home Care hours (excluding 24/7 care) provided has increased every year since 2011.

**Figure 2: Home Care (a) clients and (b) hours provided during the census week, 2006- 2015**

Note: 24/7 care has been excluded under the Home Care definition used since 2013. Two lines are provided in this chart for Home Care hours to provide comparability.

Source: Scottish Government Social Care Survey 2013-2015,  
Scottish Government Home Care Census 2006-2012

The number of people in receipt of Direct Payments has continued the same trend as previous years, increasing from 6,010 in 2013-14 to an estimated 6,450 in 2014-15 (Figure 3). Expenditure on Direct Payments has also increased, from £76.1 million in 2013-14 to an estimated £86.1 million in 2014-15.

**Figure 3: Direct Payments (SDS option 1), clients and expenditure, financial year 2005-06 to 2014-15\***

\* Direct Payments totals include an estimate for East Renfrewshire council – see 5.5 (background notes).

Scottish Government Self-Directed Support/Direct Payments Survey 2006-2012

## 2. Social Care Summary Information

### Age and gender

Figure 4 shows that most social care clients tend to be in older age groups, and that the proportion of clients who are female increases with age; for the youngest age groups there is a slight majority who are male, however as the age groups get older there is an increasing proportion of females. The 18-64 age group (covered in Section 4 of this report) is split almost exactly 50/50 between male and female. For clients aged 65+ (covered in Section 3 of this report) 67% are female and 33% are male.

Factors that affect this include women on average living longer than men and women being more likely to live alone as they get older. Figure 4 also shows that the 0-17 age group accounts for less than 2% of clients. Due to potential disclosure issues with small numbers there is no section focusing on 0-17 year olds in this report.

**Figure 4: Age and gender of Social Care clients, 2015**

Note: Total of 205,430 clients. Gender information was unavailable for 40 clients.

Source: Scottish Government Social Care Survey 2015

### Ethnicity

Of all 2015 Social Care clients for whom ethnicity information was known, 99% were recorded as being “White”, with 1% in other ethnic groups (Table 1).

**Table 1: Ethnicity of Social Care clients, 2015**

Ethnic Group	Clients*	Percentage**
White	144,000	99%
Other ethnicity	1,680	1%

\* Ethnicity information was unavailable for 59,740 clients.

\*\* Percentages are based on client figures rounded to the nearest ten and are given to nearest percentage point.

Source: Scottish Government Social Care Survey 2015

## Living arrangements (Home Care clients aged 18+)

Home Care clients are more likely to be living alone as they get older: 62% of those aged 65+ were living alone, compared with 47% of those aged 18-64 (Figure 5)

**Figure 5: Living arrangements of Home Care clients aged 18+\*, 2015**

Based on 46,280 Home Care clients aged 18+. There were 15,220 cases with no data on Living Arrangements.  
Source: Scottish Government Social Care Survey 2015

## Client Group

Figure 6 shows the breakdown of Social Care clients by client group: the reason for needing a social care service. This shows that the largest groups are “Frail Older People” and “Physical Disability”.

**Figure 6: Client Group of clients receiving Social Care services, 2015**

- Total of 205,430 clients

\* Dementia is known to be under recorded in the social care management information system.

\*\* “Other” includes addictions, palliative care and carers.

Source: Scottish Government Social Care Survey 2015

Figure 7 shows the breakdown of 2015 Social Care clients by age and client group. Almost all of the clients receiving a service due to being frail and elderly (98%) or due to dementia (97%) are aged 65 and over, while the majority of those receiving a service due to Mental Health or a Learning Disability are aged under 65.

**Figure 7: Proportion of Social Care clients aged (a) under 65 and (b) 65+, by client group, 2015**

Source: Scottish Government Social Care Survey 2015

## Home Care service provision

Over the past ten years Local Authorities have increasingly purchased Home Care from the private and voluntary sector, rather than providing services directly themselves. In March 2015, 48% of clients were receiving services provided solely by Local Authority staff (Figure 8). This proportion has been decreasing each year since 2007, and this is the first year that the figure has fallen below 50%. The proportion of Home Care hours being provided by Local Authority staff was 33% in March 2015 and has again decreased every year since 2007. The difference between these proportions and those seen for client numbers reflects the fact that the private and voluntary sectors, on average, provide larger packages of care.

**Figure 8: Home Care provision by Service Provider, 2007 to 2015 (all ages)**

Source: Scottish Government Social Care Survey 2013-2015, Home Care Census 2007-2012

**Age breakdown for key services covered in this report**

Sections 3 and 4 of this report focus on older people (ages 65+) and working-age adults (ages 18-64) respectively. The services covered in these sections are Home Care, Community Alarm / Telecare and Direct Payments: Figure 9 shows the age distribution of clients receiving these three services: while Community Alarm / Telecare and Home Care services are mainly used by older people, the majority of people receiving Direct Payments are aged under 65.

**Figure 9: Home Care, Community Alarm/Telecare and Direct Payments clients, by age, 2015**

Source: Scottish Government Social Care Survey 2015

## Local Authority comparison: Home Care & Direct Payments rates per 1,000 population

Figures 10 and 11 give an overview of how service provision varies across Scotland for Home Care and Direct Payments respectively. The number of clients receiving Home Care / Direct Payments for each Local Authority is presented as a rate per 1,000 population.

Note that while these charts enable comparisons to be made between Local Authorities, they should not be considered as a “ranking”. There are several factors that can affect levels of recorded service provision, such as differing proportions of elderly people (who make greater use of Home Care) and different levels of deprivation. Such variations are reflected in the funding formulae used to allocate resources to Local Authorities.

**Figure 10: Clients receiving Home Care per 1,000 population, by Local Authority, 2015**

Source: Scottish Government Social Care Survey 2015

**Figure 11: Clients receiving Direct Payments per 1,000 population, by Local Authority, 2015**

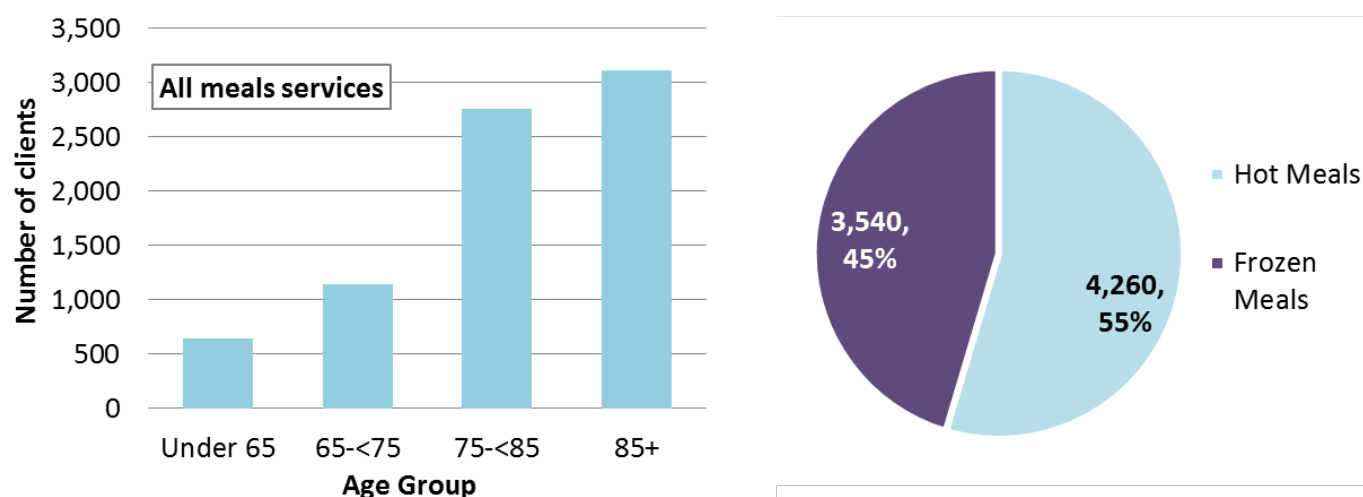

\* No 2015 data on Direct Payments was available from East Renfrewshire council – see 5.5 (background notes).

Source: Scottish Government Social Care Survey 2015

## Meals Services

Data on Meals services provided at home has proved difficult for Local Authorities to capture, and as such the figures presented here; i) are likely to be less than the true figures, and ii) should not be compared with previous years' figures to gauge changes in provision. There were 7,640 people recorded as receiving Meals services at the 2015 census. Figure 12 shows that most clients who received meals services were in the older age groups, while the majority (55%) received hot meals rather than frozen meals.

**Figure 12: Clients aged 65+ receiving Hot or Frozen Meals\*, by age, 2015**

\* Some clients receive both hot and frozen meals.

\* Four Local Authorities did not submit Meals data for 2015. Direct comparisons should not be made with previous years.

Source: Scottish Government Social Care Survey 2015

## Housing Support

Data on Housing Support is presented for the first time in 2015. Housing Support includes services such as assistance to claim welfare benefits, filling in forms, managing budgets and help with shopping and housework. In previous years there has been some overlap in the definitions of Housing Support and Home Care used in recording by some Local Authorities; from 2013 Local Authorities were asked to record Live-in and 24/7 services as Housing Support and not Home Care. *Note that around 80% of Housing Support clients were recorded as also receiving another Social Care service, while for 10 Local Authorities this figure was 100%. This suggests there are likely to be other Housing Support clients who are not captured in the survey.*

There were 18,030 people recorded as receiving Housing Support in 2015. This is just under a third of the number who receive Home Care (61,500). While Home Care is provided mainly for older people, Housing Support tends to be split more evenly between older people and under 65s (Figure 13). Note that there is some overlap between the two categories: around one third of Housing Support clients (32%) also received Home Care.

**Figure 13: Number of clients receiving Housing Support\* and Home Care, by age, 2015**

\*Around one third of Housing Support clients (32%) also received Home Care.

\*80% of Housing Support clients were recorded as also receiving another Social Care service, while for 10 Local Authorities this figure was 100%. This suggests there may be extra Housing Support clients not captured in the survey.

Source: Scottish Government Social Care Survey 2015

The remainder of this report looks in more detail at the provision of Home Care, Community Alarm / Telecare services and Direct Payments for older people (Section 3) and working age adults (Section 4).

### 3. Older People – Clients aged 65+

This section provides more detail on those people receiving Social Care services who are aged 65 and over, and who account for more than two-thirds (74%) of all Social Care clients reported on in this publication.

#### 3.1 Home Care for clients aged 65+

There were 49,650 Home Care clients aged 65+ in March 2015. The rate per population of clients aged 65+ receiving Home Care has decreased slightly in the last year to just over 50 per 1,000 population (Figure 14). The decrease in rates per population since 2006 is partly due to an increase in the elderly population and care being focused on clients with high levels of need.

**Figure 14: Home Care clients per 1,000 population aged 65+, 2006 to 2015**

Source: Scottish Government Social Care Survey 2013-2015, Home Care Census 2006-2012

Population data: National Records for Scotland mid-year population estimates up to 2014 (latest available).

The number of people aged 65+ receiving Home Care has remained relatively stable over the past three years, following decreases in preceding years (Figure 15). The number of Home Care hours provided has also remained stable in the last year, following increases in previous years.

**Figure 15: Home Care clients aged 65+ and hours provided, 2011 to 2015**

Source: Scottish Government Social Care Survey 2013-2015, Home Care Census 2011-2012

The majority of Home Care clients tend to receive smaller amounts of care per week: nearly two thirds (65%) of those aged 65+ received less than 10 hours of care per week (Figure 16). 7% of Home Care clients aged 65+ received more than 20 hours of care per week in March 2015.

**Figure 16: Home Care clients aged 65+ by level of service, 2015**

Source: Scottish Government Social Care Survey 2015

Table 2 shows that 54% of Home Care clients aged 65+ in March 2015 received their care solely from Local Authorities – this has decreased from 60% in 2013 and 55% in 2014. The table also provides two measures of the average hours of care provided per week to clients aged 65+, by service provider; the mean (total hours divided by the number of clients) and the median (the “middle” value: half of values are greater than it and half less, which reduces the impact of extremely large values). Both measures show that those clients receiving care solely from Local Authorities tend to have smaller amounts of care per week.

**Table 2: Home Care for clients aged 65+, by service provider, 2015**

Service Provider	Number of clients		Client hours		Average (mean) hours per week	Average (median) hours per week
Local Authority only	26,570	54%	199,000	44%	7	6
Private sector only	17,150	35%	169,700	37%	10	8
Voluntary sector only	1,400	3%	22,900	5%	16	7
LA plus private	3,120	6%	50,100	11%	16	14
LA plus voluntary	520	1%	7,300	2%	14	11
All other combinations	240	0%	4,100	1%	17	14
<b>Total</b>	<b>49,650</b>	<b>100%</b>	<b>453,100</b>	<b>100%</b>	<b>9</b>	<b>7</b>

Source: Scottish Government Social Care Survey 2015

Figure 17 shows the distribution of March 2015 Home Care clients aged 65+, by the principal reason they are receiving care (their ‘client group’). There are a large number who receive care either as a result of frailty due to old age, or due to a physical disability. Note that Dementia is known to be under-recorded by Local Authorities, and so it is likely there are clients in other client groups (e.g. “Frail Older people”) who have Dementia.

**Figure 17: Home Care Clients aged 65+ by Client group and age group, 2015**

Based on 49,650 home care clients aged 65+.

\* Dementia is known to be under recorded by Local Authorities in their social care information systems.

Source: Scottish Government Social Care Survey 2015

Figure 18 shows that of the Home Care clients aged 65+ for whom living arrangements are known, 62% lived alone. As would be expected this is higher than the figure for 18-64 year olds (47%),

**Figure 18: Living arrangement of clients aged 65+ receiving Home Care services, 2015**

Based on 38,440 clients for whom Living Arrangements were known. Living arrangements information was unavailable for 11,220 clients.

Source: Scottish Government Social Care Survey 2015

### 3.2 Community Alarm / Telecare Services for clients aged 65+

From 2015, Local Authorities were asked to provide data on Community Alarm/Telecare services provided at any time during the financial year 2014-15 – previously only those receiving the service during the March census week were recorded). This has contributed to a jump in the number of Community Alarm/Telecare clients recorded in the latest year.

In the year 2014-15, 104,710 people aged 65+ made use of a Community Alarm and/or another Telecare Service. 77% of these had only a Community Alarm (Figure 19).

**Figure 19: Distribution of clients aged 65+ receiving Community Alarm and/or another Telecare service, by client group, 2015**

\* From 2015 Local Authorities were asked to record all clients receiving Community Alarms/Telecare at any time during the financial year. Previously only clients receiving these services during the March census week were recorded.

Source: Scottish Government Social Care Survey 2013-2015, Home Care Census 2011-2012

### 3.3 Direct Payments for clients aged 65+

In 2014-15, an estimated 2,350 people aged 65+ received Direct Payments. The total amount spent by Local Authorities on Direct Payments to this age group in 2014-15 was an estimated £21.9 million. This saw the continuation of the trend of increasing numbers of people receiving Direct Payments; while the increase between 2013-14 and 2014-15 was smaller than previous years, it followed a particularly large increase between 2012-13 and 2013-14. Figure 20 shows the increase in Direct Payment clients aged 65+ over the last ten years.

**Figure 20: Number of people aged 65+ receiving Direct Payments, 2005-06 to 2014-15\***

\* Direct Payments totals include an estimate for East Renfrewshire council – see 5.5 (background notes).

Source: Scottish Government Social Care Survey from 2013, Self-Directed Support/Direct Payments Survey up to 2012.

Table 3 shows the breakdown of 2014-15 clients aged 65+ receiving Direct Payments by client group. Frailty due to old age is the primary reason for clients in this age group receiving Direct Payments, followed by Physical Disabilities and Dementia.

**Table 3: Direct Payments for clients aged 65+, by client group, 2014-15**

Client Group	Number of clients**	Expenditure (£ millions)	Mean <sup>1</sup> value of direct payments	Median <sup>2</sup> value of direct payments
Frail older people	1,110	£10.0	£9,000	£6,000
Physical disability	500	£4.8	£10,000	£7,000
Dementia***	320	£3.1	£10,000	£6,000
Mental Health	90	£0.7	£8,000	£6,000
Learning disability****	20	£0.4	£18,000	£5,000
Other	70	£0.7	£10,000	£8,000
Not known	180	£1.4	£8,000	£5,000
All*	2,350	£21.9	£9,000	£6,000

\* The figures presented for "All" clients aged 65+ receiving Direct Payments have been adjusted to account for missing data from East Renfrewshire, so are slightly higher than the sum of individual client groups

\*\* Some clients receive more than one direct payment

\*\*\* Dementia is known to be under recorded by Local Authorities in their social care information systems.

\*\*\*\* "Learning Disability" includes clients with both a Learning Disability and Physical Disability.

<sup>1</sup> The Mean denotes the "average" value of direct payments, i.e. the sum of all payments divided by the number of payments (rounded to nearest £1,000)

<sup>2</sup> The Median denotes the "middle" value of direct payments, i.e. the value at which half of the payments are less and half are more (rounded to nearest £1,000)

Source: Scottish Government Social Care Survey 2015

## 4. Working Age Adults – Clients aged 18 to 64

This section of the report provides more detail on the 49,250 Social Care clients aged 18 to 64 in the survey.

### 4.1 Home Care for adults aged 18 to 64

There were 11,360 Home Care clients aged 18-64 in 2015. Figure 21 shows that the rate of Home Care clients aged 18 to 64 per 1,000 population increased from March 2013 to March 2015, following a decrease between 2009 and 2013.

**Figure 21: Home Care clients per 1,000 population aged 18-64, 2006 to 2015**

Source: Scottish Government Social Care Survey 2013-2015, Home Care Census 2006-2012  
Population data: National Records for Scotland mid-year population estimates up to 2014 (latest available)

The number of people aged 18 to 64 receiving Home Care has increased slightly in each of the last two years, following decreases in the preceding three years (Figure 22). The number of Home Care hours provided to 18-64 year olds has increased in each of the last two years.

**Figure 22: Home Care clients aged 18-64 and hours provided, 2010 to 2015**

Source: Scottish Government Social Care Survey 2013-2015, Home Care Census 2010-2012

Around half (48%) of Home Care clients aged 18 to 64 received less than 10 hours of care per week (Figure 23), compared to 65% for older people (see Figure 16, Section 3). 13% of clients aged 18 to 64 received more than 50 hours of care per week compared with only 1% of clients aged 65+.

**Figure 23: Distribution of Home Care hours, clients aged 18 to 64, 2015**

Based on 11,360 home care clients aged 18-64.

Source: Scottish Government Social Care Survey 2015

Younger adults (aged 18-64) are less likely to use Local Authority run services: only 26% of clients aged 18 to 64 received their care solely from Local Authorities (Table 4), compared with 54% for clients aged 65+ (Table 2). Only 13% of Home Care hours for clients aged 18 to 64 were provided solely by Local Authorities in 2015, compared with 44% for those aged 65 and over.

There is also a greater discrepancy between the mean and median numbers of hours for clients aged 18 to 64 than was seen for clients aged 65+ (Table 2). This is due to the distribution of home care hours seen in Figure 23 and in particular the 13% of clients who receive 50 or more hours of care each week.

**Table 4: Home Care by Service Provider for clients aged 18 to 64, 2015**

Service Provider	Number of clients		Client hours		Average (mean) hours per week	Average (median) hours per week
Local Authority only	2,930	26%	31,400	13%	11	6
Private sector only	4,470	39%	88,700	36%	20	10
Voluntary sector only	3,090	27%	108,100	44%	35	18
LA plus private	490	4%	11,600	5%	24	16
LA plus voluntary	120	1%	3,100	1%	25	16
All other combinations	150	1%	5,500	2%	36	28
<b>Total</b>	<b>11,360</b>	<b>100%</b>	<b>248,400</b>	<b>100%</b>	<b>22</b>	<b>10</b>

Source: Scottish Government Social Care Survey 2015

Figure 24 shows people aged 18-64 who receive a home care service by the principal reason they are receiving care (their 'client group'). The main reasons that people in this age group require home care is because they have a physical disability (35% of clients) or a learning disability (32% of clients). An additional 4% of clients aged 18-64 have both a Learning and Physical disability.

**Figure 24: Home Care Clients aged 18 to 64, by client group, 2015**

11,350 home care clients aged 18-64  
Source: Scottish Government Social Care Survey 2015

Figure 25 shows that of the Home Care clients aged 18 to 64 for whom living arrangements are known, 47% live alone. This is lower than the 62% of clients aged 65+ who live alone (Figure 18).

**Figure 25: Living arrangement of clients\* aged 18 to 64 receiving Home Care services, 2015**

\*Based on 7,550 clients for whom Living Arrangements were known. Living arrangements information was unavailable for 3,810 clients.

Source: Scottish Government Social Care Survey 2015

## 4.2 Community Alarm / Telecare Services for clients aged 18 to 64

There were 17,330 people aged 18-64 in receipt of a Community Alarm and/or Telecare service in the year 2014-15. As explained in Section 3 of this report, in 2015 Local Authorities were asked to provide data on all clients receiving Community Alarms/Telecare at any point during the financial year; previously they only recorded those receiving the service during the March census week. (Figure 26).

**Figure 26: Clients aged 18 to 64 receiving Community Alarm and/or another Telecare service, 2011 to 2014-15\***

\* From 2015 Local Authorities were asked to record all clients receiving Community Alarms/Telecare at any time during the financial year. Previously only clients receiving these services during the March census week were recorded.

Source: Scottish Government Social Care Survey 2013-2015, Home Care Census 2010-2012

## 4.4 Direct Payments for clients aged 18 to 64

In 2014-15, an estimated 3,270 people aged 18 to 64 received Direct Payments to purchase the care services they need. The total amount spent by Local Authorities on Direct Payments for this age group in 2014-15 was £58 million. As with the 65+ age group, this saw the continuation of the trend of increasing numbers of people receiving Direct Payments, which has been the case each year since 2009-10 (Figure 27).

**Figure 27: People aged 18 to 64 who received Direct Payments, 2009-10 to 2014-15\***

\*Direct Payments totals include an estimate for East Renfrewshire council – see 5.5 (background notes).

Source: Scottish Government Social Care Survey 2013-2015, Self-Directed Support/Direct Payments Survey 2010-2012

Table 5 shows the breakdown of clients aged 18 to 64 receiving Direct Payments to purchase the care services they need. Physical Disabilities and Learning Disabilities are the primary reason for clients in this age group receiving Direct Payments.

**Table 5: Direct Payments for clients aged 18 to 64, by client group, 2014-15**

Client Group	Number of clients**	Expenditure (£ millions)	Mean <sup>1</sup> value of direct payments	Median <sup>2</sup> value of direct payments
Physical disability	1,150	£20.3	£18,000	£11,000
Learning disability****	1,030	£19.5	£19,000	£11,000
Mental Health	240	£2.1	£9,000	£5,000
Frail older people	60	£0.8	£15,000	£8,000
Dementia***	20	£0.2	£12,000	£9,000
Other	180	£2.2	£12,000	£7,000
Not known	440	£7.7	£17,000	£13,000
All*	3,270	£58.0	£17,000	£10,000

\* The figures presented for "All" clients aged 65+ receiving Direct Payments have been adjusted to account for missing data from East Renfrewshire, so are slightly higher than the sum of individual client groups

\*\* Some clients receive more than one direct payment

\*\*\* Dementia is known to be under recorded by Local Authorities in their social care information systems.

\*\*\*\* "Learning Disability" includes clients with both a Learning Disability and Physical Disability.

<sup>1</sup> The Mean denotes the "average" value of direct payments, i.e. the sum of all payments divided by the number of payments (rounded to nearest £1,000)

<sup>2</sup> The Median denotes the "middle" value of direct payments, i.e. the value at which half of the payments are less and half are more (rounded to nearest £1,000)

Source: Scottish Government Social Care Survey 2015

## 5. Background information on the collection of the data

### 5.1 Social Care Survey

**Figure 28: Services recorded in 2015 Social Care Survey, and number of clients\***

\* Clients can receive multiple social care services. There were 205,430 clients captured in the 2015 survey.

\*\* Data on "Social Worker / Support Worker" and Self-Directed Support is in development, and not reported on in detail in this release. Follow-up analysis on these topics will be published at a later date.

\*\*\* Four Local Authorities did not submit data on Meals services for 2015.

\*\*\*\* Direct Payments totals include an estimate for East Renfrewshire council – see 5.5.

All the new data presented in this release was collected through the 2015 Social Care Survey. This is the third year of the survey, which replaced the previously separate Home Care and Direct Payments data collections (see 5.2).

The data is supplied by all 32 Local Authorities in Scotland, who collect this information as part of their Social Care Management Information system and is submitted to Scottish Government via a secure web-based system called ProcXed. The ProcXed system reduces administrative burdens and increases the speed, ease and accuracy (via inbuilt validation checks) of information exchange.

Information is returned for every person who has had a Social Care assessment and receives or uses:

*During the Census Week (any week including 31 March 2015):*

- Home Care services, including re-ablement services
- Meals services (provided or purchased by the local authority);
- Housing Support services;
- OPTIONAL - other services e.g. Shopping, Laundry.

*During the financial year 1 April 2014 to 31 March 2015:*

- Community Alarms / other Telecare services (this was previously only collected for the census week);
- Services or support provided through Self-Directed Support, including Direct Payments;
- Social Worker / support worker services

## 5.2 Data collection prior to 2013

The 'Home Care Census' collected annual statistics on the number of people receiving a home help or Home Care service at the end of March each year. From March 2010, the statistics were collected at the individual level, having previously been collected through an aggregate data return. See <http://www.gov.scot/Topics/Statistics/Browse/Health/HomeCareCensus> for more detail on the survey design and collection.

The "Self-Directed Support (Direct Payments)" Survey collected annual statistics on the number of people who receive direct payments to purchase the care that they need. It should be noted that this collection was focused solely on Direct Payments, and not Self-Directed Support as it is now defined (see section on Self-Directed Support below). These statistics relate to everyone who received a Direct Payment during the relevant financial year and from 2010 onwards have been collected at the individual level, having previously been collected through an aggregate data return.

See <http://www.gov.scot/Topics/Statistics/Browse/Health/SelfDirectedSupportcensus> for more detail on the survey design and collection.

## 5.3 Self-Directed Support Act

The Self-Directed Support Act was introduced in Scotland in April 2014 (see <http://www.selfdirectedsupportscotland.org.uk> for details). Self-Directed Support (SDS) gives people control over an individual budget and allows them to choose how that money is spent on the support and services they need to meet their agreed health and social care outcomes.

Self-Directed Support allows people to choose a number of different options for getting support. The person's individual budget can be:

- SDS Option 1: Taken as a Direct Payment (a cash payment). Information on Direct Payments has been collected since 2001 and is reported on in this publication.
- SDS Option 2: Allocated to a provider that the person chooses. The council holds the budget but the person is in charge of how it is spent (this is sometimes called an individual service fund); or
- SDS Option 3: the person can choose a council arranged service; or
- SDS Option 4: the person can choose a mix of these options for different types of support

Over time all Social Care and support will transition to being focused on achieving personal outcomes. This presents challenges for the reporting and comparability of Social Care data: increasing numbers of people will be directing their own support rather than services being provided directly for them. It is expected that in future this publication will become more focused on Social Care clients, what their needs are, their individual budget and the options that they choose.

More information on Self-Directed Support is available at:

<http://www.gov.scot/Topics/Health/Support-Social-Care/Support/Self-Directed-Support>

## 5.4 Revisions to previous years' figures

There have been no revisions to figures from the *Social Care Services, Scotland, 2014* publication.

## 5.5 Data Quality Issues

### *Direct Payments (Self-Directed Support Option 1)*

The data quality issues in this report are primarily due to implementation of the Self-Directed Support Act (see 5.3), and the resulting change to recording systems carried out by Local Authorities. This mainly affects the figures for Direct Payments, now SDS Option 1:

- East Renfrewshire council were unable to submit any data on Direct Payments or the other SDS options. The Scotland-level figures for both the number of clients receiving Direct Payments and expenditure have therefore been adjusted to account for this missing data and to ensure comparability with previous years. This was done by “scaling-up” the 2014 East Renfrewshire figures based on the change between 2014 and 2015 in the other 31 Local Authorities, then adding the scaled-up figure to the Scotland total.
- Scottish Borders and Falkirk councils have stated that some clients who were previously recorded as receiving Direct Payments have not been captured under the new SDS system as SDS Option 1. This has resulted in an apparent drop in Direct Payments clients in these authorities between 2014 and 2015. This has a minimal effect on the Scotland figures.
- In 2015 Local Authorities were asked to record the expenditure for Self-Directed Support as the *Gross value of the budget allocated within the reporting year*. Argyll & Bute and West Lothian councils have stated that they were unable to supply Gross expenditure figures and so supplied *Net* expenditure (i.e. net of any client contribution) figures instead. These figures have been included within the Scotland level expenditure totals.

### *Meals Services*

Data on Meals services has proved difficult for Local Authorities to capture and so the charts presented in this report have been provided for information on the data collection, rather than an exact number of the people in Scotland receiving Meals services. Four local authorities did not supply data on Meals services (East Renfrewshire, Edinburgh City, Eilean Siar and Glasgow City).

## 5.6 Client groupings

Since 2010, Local Authorities have been able to provide multiple client groups for each person. In this publication, where a local authority returned multiple client groups, in order to avoid double counting clients have been allocated to the group that appears first in the list below:

1. Dementia
2. Mental Health Problems
3. Learning Disability
4. Learning Disability and Physical Disability
5. Physical Disability
6. Frail older people
7. Other vulnerable groups (including Addiction, Palliative Care and Carer's)
8. Not known

For example, if a client has dementia and has a physical disability, then they will appear in the dementia client group (as this appears higher in the list) for the purpose of analysis.

It should be noted that Local Authorities vary in how they record people whose reason for receiving a service is frailty due to old age. Some record this as ‘physical disability’ while others record as ‘frail older people’. Therefore when looking at the older age groups these two client groups are best considered together when comparing statistics for different local authorities.

It is also important to note that “Dementia” is known to be under-recorded in social care management information systems.

## 5.7 Community Alarm and other Telecare services

From 2015, Local Authorities were asked to collect information on all people receiving a Community Alarm / Telecare service at any time during the financial year 2014-15. This information was previously asked only for the March census week.

Telecare is the remote or enhanced delivery of care services to people in their own home by means of telecommunications and computerised services. Telecare usually refers to sensors or alerts which provide continuous, automatic and remote monitoring of care needs emergencies and lifestyle changes, using information and communication technology (ICT) to trigger human responses, or shut down equipment to prevent hazards (Source: National Telecare Development Programme, Scottish Government). Community Alarms are considered to be the basic, introductory level of Telecare.

Community Alarm is defined as: A person in receipt of a technology package which consists of a communication hub (either individual home hub unit or part of a communal system e.g. the alarm system within sheltered housing), plus a button/pull chords/pendant which transfers an alert/alarm/data to a monitoring centre or individual responder.

Telecare is defined as: A person in receipt of a technology package which goes over and above the basic community alarm package identified above, and includes any other sensors or monitoring equipment e.g. (not an exhaustive list):

- linked pill dispensers,
- linked smoke detectors,
- linked key safes,
- bogus caller buttons and door entry systems,
- property exit sensors, extreme temperature, flood, falls, movement detectors.

Standalone devices and pieces of equipment are not be considered 'Telecare' for the purpose of this return i.e. they should be capable of alerting/providing information to a monitoring centre or individual responder and should generally be 'linked' to the home hub or communal alarm system.

## 5.8 Other data sources

In order to calculate rates per population, the National Records of Scotland mid-year population estimates have been used. For 2015 rates, the 2014 mid-year population estimates have been used as these are the latest available.

<http://www.nrscotland.gov.uk/statistics-and-data/statistics/statistics-by-theme/population>

5.9 Cost of respondent burden

To calculate the cost of respondent burden to this survey each Local Authority was asked to provide an estimate of the time taken in hours to extract the requested information and complete the survey form. The average time from 29 Local Authorities has then been used within the calculation below to calculate that the total cost of responding to this survey is £38,000.

	(number of responses	
	X	
Cost of		any additional
responding	= median time it takes to respond in hours	+ costs experienced
(£)	X	by data providers
	hourly rate of typical respondent)	

## A NATIONAL STATISTICS PUBLICATION FOR SCOTLAND

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be interpreted to mean that the statistics: meet identified user needs; are produced, managed and disseminated to high standards; and are explained well.

### Correspondence and enquiries

For enquiries about this publication please contact:

Steven Gillespie  
Analytical Services Division  
Telephone: 0131 244 3777  
e-mail: [Swstat@scotland.gov.scot](mailto:Swstat@scotland.gov.scot)

For general enquiries about Scottish Government statistics please contact:  
Office of the Chief Statistician, Telephone: 0131 244 0442,  
e-mail: [statistics.enquiries@gov.scot](mailto:statistics.enquiries@gov.scot)

### How to access background or source data

A spreadsheet accompanying this statistical bulletin with Local Authority data can be found at: <http://www.gov.scot/Topics/Statistics/Browse/Health/Publications> and selecting "SOCIAL CARE SERVICES, SCOTLAND, 2015".

A more detailed spreadsheet, which covers the same general topics included in this report but with more sub-categories and data going back to 1999, will be uploaded to the following web page shortly after this release:

<http://www.gov.scot/Topics/Statistics/Browse/Health/Data/HomeCare>

### Complaints and suggestions

If you are not satisfied with our service or have any comments or suggestions, please write to the Chief Statistician, 3WR, St Andrew's House, Edinburgh, EH1 3DG, Telephone: (0131) 244 0302, e-mail [statistics.enquiries@gov.scot](mailto:statistics.enquiries@gov.scot).
